Introduction

This project was completed as part of the Digital Literacy course with the objective of developing essential digital skills required for academic and professional environments. As a Student Digital Ambassador, the role involved creating awareness about digital tools, safe online practices, and effective communication.

The project consisted of five tasks, including designing infographic, building a digital portfolio, exploring coding and collaboration platforms, understanding email etiquette, and studying cybercrime awareness. Each task focused on practical exposure to real-world tools such as GitHub, LinkedIn, Google Forms, and coding platforms.

Overall, this project helped in understanding how to build a professional digital presence, communicate responsibly online, and stay safe in the digital world.

Task 1: Digital Literacy Infographic

For this task, I created an infographic using Paint.net to explain the concept of digital literacy. The infographic covered topics such as useful digital tools for students, safe internet practices, and maintaining a professional online presence. Tools like Notion for notetaking, Khan Academy for learning, YouTube for educational videos, and Anki for flashcards were included to make the content practical and relatable.

The design focused on clarity and minimalism, using icons and short descriptions to ensure easy understanding, the icons were taken from icons8, and some were made with AI. One challenge I faced was organizing multiple topics into a single page without making it cluttered. Balancing visual appeal with informative content requires careful selection of elements and layout adjustments.

This task helped me understand how visual communication can simplify complex ideas and make information more engaging for students. The required project was clearly intended to help you design complex ideas with simplicity.

Task 2: Digital Portfolio

In this task, I created and updated profiles on platforms such as GitHub, LinkedIn, and Kaggle. GitHub was used to host my project repository and create a profile README showcasing my academic background and interests. LinkedIn was already settled up to build a professional identity, including my education details and future aspirations. Kaggle was explored as a platform for data science practice and learning.

Each platform serves a different purpose: GitHub for project showcasing, LinkedIn for networking, and Kaggle for skill development. Over the next four years, I plan to actively use GitHub to upload projects, LinkedIn to connect with professionals and explore opportunities, and Kaggle to improve problem-solving skills in data-related fields, I might not use Kaggle as much, but I will definitely explore it to its full extent.

This task highlighted the importance of maintaining a professional online presence and starting early to build a strong digital portfolio.

Task 3: Platforms Exploration

For this task, I used HackerRank as the coding practice platform and completed a beginner-level problem to understand the basics of programming challenges. This helped me get familiar with problem-solving approaches and coding environments.

Additionally, I created a Google Form consisting of five questions as a Digital Literacy Awareness Quiz. The form included both multiple-choice and short-answer questions, and responses were automatically recorded in a linked Google Sheet. This demonstrated how collaboration tools can be used effectively for data collection and analysis, although the form had only 5 responses, I had a lot of fun making the questions and doing the starting question of hacerRank.

These platforms are highly useful academically. Coding platforms improve logical thinking and programming skills, while tools like Google Forms simplify surveys, feedback collection, and data organization. This task showed how digital tools can enhance both individual learning and collaborative work.

Task 4: Email Etiquette & Communication

A common issue in digital communication is the use of informal or unclear emails in professional settings. For example, a student requesting an assignment extension without a proper subject line, greeting, or respectful tone may create a negative impression and may not receive a favorable response from the professor.

This problem can be avoided by following basic email etiquette such as using a clear and specific subject line, addressing the recipient properly, maintaining a polite and formal tone, and structuring the email into short, clear paragraphs. Including proper closing and signature also adds professionalism.

This task helped me understand that effective communication is not just about conveying information, but also about presenting it respectfully and clearly. Good email practices can improve responses and build a positive professional image.

Task 5: Cybercrime Awareness

While researching cybercrime, I was surprised by how common phishing and online payment fraud have become, especially among students and young users. Many attacks rely on simple techniques such as fake messages, emails, or links that appear trustworthy but are designed to steal sensitive information.

One key realization was that even a small mistake, such as clicking an unknown link, downloading suspicious files, or sharing OTPs, can lead to serious consequences like financial loss, identity theft, or account hacking. Awareness is therefore the first step in prevention.

As a result of this task, I will be more cautious while handling online transactions, verifying sources before responding, and avoiding unknown links. Developing safe digital habits is essential to protect personal and financial information in today’s digital environment.

Task 5: Cybercrime Awareness

This project provided practical exposure to essential digital skills required in modern education and professional environments. From creating visual content to building an online portfolio and understanding cybersecurity, each task contributed to developing digital awareness.

It emphasized the importance of responsible online behavior, effective communication, and continuous learning through digital platforms. The knowledge gained from this project will be useful throughout my academic journey and future career. Overall, this experience has strengthened my confidence in navigating the digital world efficiently and safely.
